Background

Interleukin 1 alpha (IL-1α) also known as hematopoietin 1 is a cytokine of the interleukin 1 family that in humans is encoded by the IL1A gene. IL-1α is produced mainly by activated macrophages, as well as neutrophils, epithelial cells, and endothelial cells. It possesses metabolic, physiological, haematopoietic activities, and plays one of the central roles in the regulation of the immune responses. It binds to the interleukin-1 receptor. It is on the pathway that activates tumor necrosis factor-α.

Basic Information

Description

Recombinant Mouse IL-1 alpha Protein is produced by *E. coli* cells expression system. The target protein is expressed with sequence (Ser115-Ser270) of Mouse IL-1 alpha (Accession # P01582) fused with No tag.

Activity

Measured in a cell proliferation assay using D10.G4.1 mouse helper T cells. The ED50 for this effect is 3.075-12.3 pg/mL, corresponding to a specific activity of $8.13 \times 10^7 \sim 3.25 \times 10^8$ units/mg.
